

# The Story Of A Floor

## Chapter 1.

The plain power floated concrete floor on this site was a potential source of dust and the client wanted a solution.

## Chapter 2.

The concrete was vacuum shotblasted, a clean, dust free Process, and the edges were prepared with a diamond Grinder. This provides an open textured surface suitable for the application of coatings and overlays.

## Chapter 3.

Prior to installing the final finish the concrete was primed using Tremco Penetrating Epoxy Primer to seal the surface and minimise the risk of pinholes.

## Chapter 4.

After the primer had cured, 3mm of Tremco Epoxy SL was installed to provide a hygienic, tough and dust free floor.

## Chapter 5.

The remarkable transformation can be seen below.  
Another happy Tremco customer.
